

- 1 An introduction to growth curves
- 2 Lecture layout
- 3 The general use of growth equations
- 4 The exponential growth curve
- 5 The exponential equation
- 6 Example application - exponential growth
- 7 The logistic growth curve
- 8 The logistic equation
- 9 The parameters of the logistic - K
- 10 The parameters of the logistic - I
- 11 Example application - logistic growth
- 12 The Gompertz growth curve
- 13 The Gompertz equation
- 14 The parameters of the Gompertz - K
- 15 The parameters of the Gompertz - I
- 16 Example application - Gompertz
- 17 The von Bertalanffy growth curve
- 18 The von Bertalanffy equation
- 19 The parameters of the von Bertalanffy - K
- 20 Example application - von Bertalanffy
- 21 The Morgan-Mercer-Flodin growth curve
- 22 The Morgan-Mercer-Flodin equation
- 23 The parameters of the MMF - K
- 24 The parameters of the MMF - d
- 25 The Weibull growth curve
- 26 The Weibull equation
- 27 The parameters of the Weibull - K
- 28 The parameters of the Weibull - d
- 29 The Janoschek growth curve
- 30 The Janoschek equation
- 31 Example application - Janoschek
- 32 The Richards growth curve
- 33 The Richards equation
- 34 The Richards equation
- 35 The Richards curve as a generalisation
- 36 Example application - Richards curve
- 37 The seasonally adjusted von Bertalanffy
- 38 Example seasonally adjusted von Bertalanffy
- 39 A published example of the von Bertalanffy
- 40 Finding the best fit
- 41 Choosing between growth curves
- 42 Choosing between a 3 or 4 parameter model
- 43 References
- 44 Software
