

Table of Contents

<i>Preface</i>	<i>i</i>
<i>Introduction</i>	<i>1</i>
Where to obtain the example data sets from	9
<i>Principal Components Analysis</i>	<i>11</i>
Uses	11
Summary of the method	12
The use of the correlation or covariance matrix	16
How many dimensions are meaningful?	16
Do my variables need to be normally distributed?	17
Data transformations	17
The horseshoe effect	18
Example applications	24
Concluding remarks on the use of PCA	51
<i>Correspondence Analysis</i>	<i>53</i>
Uses	53
Summary of the method	54
The arch effect and Detrended Correspondence Analysis	58
Common user options	58
Example applications	59
Concluding remarks on the use of CA	71
<i>Multidimensional Scaling</i>	<i>73</i>
Uses	73
Summary of the method	74
Metric and non-metric similarity or distance measures	75
Common user options	76

Example applications	79
Concluding remarks on the use of MDS	93
<i>Linear Discriminant Analysis</i>	95
Uses	95
Summary of the method	96
Normality	99
Example applications	99
Concluding remarks on the use of Linear Discriminant Analysis	112
<i>Canonical Correspondence Analysis (CCA)</i>	113
Uses	113
Summary of the method	114
Do my variables need to be normally distributed?	114
Minimising the number of explanatory variables	115
Multicollinearity and the selection of variables	115
Testing for significance	115
The choice of scaling for the CCA output	116
Example applications	119
Concluding remarks on the use of CCA	141
<i>TWINSPAN (Two-way indicator species analysis)</i>	143
Uses	143
Summary of the method	144
Common user options	147
Example applications	149
Concluding remarks on the use of TWINSPAN	159
<i>Hierarchical Agglomerative Cluster Analysis</i>	161
Uses	161
Summary of the method	161
Some useful measures of similarity	163
What is R and Q-mode analysis?	167

Testing for the significance of groups	168
Example applications	168
Concluding remarks on the use of Agglomerative Cluster Analysis	188
<i>Analysis of Similarities, ANOSIM</i>	189
Uses	189
Summary of the method	189
Example applications	190
<i>Tips on using CAP and ECOM by Richard Seaby, the program front end designer</i>	193
<i>Glossary of multivariate terms</i>	205
<i>Index</i>	211

Index

- Analysis of Similarities, ANOSIM, 187**
- arch effect, 57**
- binary coefficients, 162**
- Canonical Correspondence Analysis, 112**
- Canonical Variate Analysis, 94**
- correlation, 16**
- correlation matrix, 25**
- Correspondence Analysis, 52**
- data**
 - binary, 7**
 - presence/absence data, 7**
 - quantitative, 6**
 - semi-quantitative, 7**
- data transformations, 17**
- dimensions, 16**
- distance, 75**
- Example application from archaeology, 24, 63, 79, 101, 105, 189**
- Example application from biology, 42, 45, 68, 88, 98, 135, 148, 154, 166, 170**
- Example application from geology, 34, 90**
- Example application from linguistics, 180**
- Example application from marketing, 59**
- Example application from palaeontology, 118**
- Example application from veterinary science, 175**
- Glossary, 203**
- Hierarchical Agglomerative Cluster Analysis, 159**
- horseshoe effect, 18**
- Linear Discriminant Analysis, 94**
- metric distance measures, 75**
- multicollinearity, 114, 122, 205**
- Multidimensional Scaling, 73**
- non-metric distance measures, 75**
- normal distribution, 17**
- Principal Components Analysis, 11**
- Q-mode, 165**
- Reciprocal Averaging, 52**
- R-mode, 165**
- rotation, 12**
- similarity, 75, 161**
- software, 9**
- transformations, 7**
- TWINSPAN, 142**
- which method to use, 8**
